The Molecular and Cell Biology major emphasizes instruction in the basic molecular principles that allow organisms to live, grow, and adapt to their environment. Molecular and Cell Biology Scientists have used model organisms to view the first few hours of development in various organisms. A single cell is fertilized, and cell division immediately begins, proliferating into a mass that will eventually form an embryo. Cells are organizing during this time, moving into position and generating the structures that an animal will need. Growing an Organism From One Cell | Cell And Molecular Biology The Cell and Molecular Biology Research Program promotes collaborative science focused on the interplay between metabolic and proliferative signaling networks, genetic and epigenetic regulations, and the tumor microenvironment.
