If components are connected in such a way that the voltage drop across each component is same then it is known as parallel circuit. In parallel circuit the voltage drop across each component is same but the currents flowing through each component may differ. The total current is the sum of currents flowing through each element. An example of a parallel circuit is the wiring ... Electric Circuit or Electrical Network | Electrical4U Everything about Circuit Theory. Circuit Theory | Electrical4U • An Electrical network is an interconnection of various electrical elements like resistors, inductors, capacitors, batteries

etc.. •And Electrical networks can either be closed or open path...And a network is a. Connection of two or more components ... What is the difference between network and circuit? - Quora A network of impedances with more than two terminals cannot be reduced to a single impedance equivalent circuit. An n-terminal network can, at best, be reduced to n impedances (at worst  $n^2$ ). For a three terminal network, the three impedances can be expressed as a three node delta ( $\Delta$ ) network or four node star (Y) network.
