Decisions from Data: How

Offline Reinforcement Learning

... The Data Model is defined as an abstract model that organizes data description, data semantics, and consistency constraints of data. The data model emphasizes on what data is needed and how it should be organized instead of what operations will be performed on data. Data Modelling: Conceptual, Logical, Physical Data Model

Types The three best-known models of this kind are the relational data model, the network data model and the hierarchical data model. These internal models: Consider a database as a collection of fixed-size records; Are closer to the physical level or file structure; Are a representation of the database as seen by the DBMS. Chapter 5 Data Modelling - Database Design - 2nd
