Oracle Database security is one of

the most important topics that have

been discussed among security personnel. The growing number of incidents proves that it's something that should be taken care of immediately. Database security should provide controlled and protected access to the members and also should preserve the overall quality of the data. Database Security -

resources.infosecinstitute.com 8 Database Auditing: Security

Considerations Auditing is the monitoring and recording of selected user database actions. It can be based on individual actions, such as the type of SQL statement executed, or on combinations of factors that can include user name, application, time, and so

on. Database Auditing: Security Considerations You will find it easier

to consider security and auditing as issues separate from the main database functions, however they are implemented. Visualise the security server and audit servers as separate functional modules.

Principles of database security To structure thoughts on security, you need a model of security. These come in Chapter 12. Database Security DbDefence is an Easy-to-use, affordable, and effective security solution for encrypting complete databases and protecting its schema within the MS SQL Server. It allows database administrators and developers to encrypt databases completely. Db defence protects the database from unauthorized access, modification, and distribution. Top 10 Database Security Tools You Should

Know Database security and auditing should be able to protect data integrity by enabling you to monitor invalid data commands and the processes involved in system administration. Auditing your database is an important aspect of database security, as it lets you track SQL activities and database access securely. Protect Data Integrity with Database Security and Auditing Database security is an important aspect of information security. Understanding how database audit and protection solutions work and in which environments they unfold their strengths is critical to successful data-centric application and infrastructure security.
