Foaming causes problems throughout a range of industrial processes, for example, in the production and processing of paper, pharmaceuticals, materials, textiles, coatings, crude oil, washing, leather, paints, adhesives, lubrication, fuels, heat transfer fluids and so on. Antifoaming and defoaming (Chapter 10) - Bubble and Foam ... A defoamer or an anti-foaming agent is a chemical additive that reduces and hinders the formation of foam in industrial process liquids. The terms anti-foam agent and defoamer are often used

interchangeably. Strictly speaking, defoamers eliminate existing foam and anti-foamers prevent the formation of further foam. Commonly used agents are insoluble oils, polydimethylsiloxanes and other silicones, certain alcohols, stearates and glycols. The additive is used to prevent formation of foam or is ad Defoamer - Wikipedia Garrett, P. That is why various additives called antifoams or defoamers are widely used to reduce the volume of undesired foam in different technologies such as pulp and paper production, food industries, textile dyeing, gas sweetening and dehydration, waste water treatment and many separation processes [1-3]. The Mechanism of Action of Antifoams In many of these applications, voluminous dynamic foam is formed, stabilized by proteins and/or sugars. The main aim of our work is to investigate of the physico-chemical factors controlling the foaming and defoaming performance of several Pluronic nonionic amphiphiles in solutions of the milk protein Sodium caseinate. Impact of the Surfactant Structure on the Foaming ... might create serious problems in many industrial processes. That is why various additives (usually called "antifoams" or "defoamers") are widely used to reduce the volume of undesired foam in different technologies, such as pulp and paper production, food processing, textile dyeing, fermentation (e.g., in drug or food manufacturing), 2004, 20, 9463 Feature Article - uni-sofia.bg Applications. Fumed silica serves as a universal thickening agent and an anticaking agent (free-flow agent) in powders. Like silica gel, it serves as a desiccant. It is used in cosmetics for its light-diffusing properties. It is used as a light abrasive, in products like toothpaste. Other uses include filler in silicone elastomer and viscosity adjustment in paints, coatings, printing inks ...
