discrete math course. The book provides practice problems and a final for review. One can use this book along side his textbook and do fine. Discrete

Mathematics DeMYSTiFied | Steven Krantz |

download  $x - 2y + 3z = 4$   $0x + 1y - 2/3z = -2$   $0x + 0y + z = 5/4$

We may immediately read off from the last equation that  $z = 5/4$ . Substituting this information into the second equation gives  $y = -7/6$ . Lastly, putting both these values into the first equation yields  $x = -25/12$ . Thus the solution of our system is  $x = -25/12, y = -7/6, z = 5/4$  or  $(-25/12, -7/6, 5/4)$ .
