EM61 operational procedures for Geonics EM61-MK2 and EM61 Geonics EM61-MK2 Geonics Metal Detectors are high power, high sensitivity metal detectors suitable for applications in the detection of both ferrous and non-ferrous metal. Insensitive to common sources of both geologic and cultural noise, Metal Detectors can be operated without compromise to data quality in most survey environments. Geonics EM61-MK2 – Utility Mapping Services, Inc. The EM61-MK2 is a time-domain, electromagnetic (EM), geophysical survey instrument. The EM source consists of two 1.0 meter (m) x 0.5 m coils which are mounted one above the other. One coil is a powerful transmitter that generates a pulsed primary magnetic field, which induces eddy currents in nearby metallic objects. STANDARD OPERATING PROCEDURES - CLU-IN The EM61, with larger coils and higher power has been optimized for the larger targets of interest to the environmental industry. Response from smaller, shallow targets can, if desired, be readily suppressed using the differential response from the two receiver coils. EM61 software uses the ratio of the two receiver responses to determine the EM61 HIGH-SENSITIVITY METAL DETECTOR BY GEONICS INC.) Description EM61-MK2 The EM61 is a high sensitivity, high resolution, time domain metal detector suitable for the detection of both ferrous and and non-ferrous metal. Typical target response is

INTRODUCTION The EM61-MK2 Electromagnetic Induction sensor (Geonics Limited, Mississauga, Ontario, Canada) is the most widely used geophysical sensor for unexploded ordnance (UXO) detection surveys. EM61-MK2 Response of Standard Munitions Items In WHEEL mode readings are triggered by a counter installed at the EM61-MK2 wheel assembly, and in MANUAL mode readings are triggered manually by the operator. The program allows you to record data while using the standard EM61-MK2 antennas (0.5 x 1 m, 1 x 1 m) centered on the antenna. The EM61 Mark II, is a powerful time domain metal detector that is able to detect both ferrous and non-ferrous metal using a single transmitter coil and two receiver coils. It generates a magnetic field from the transmitter inducing eddy currents in nearby metal objects. We rent the Mark II and Mark IIA versions.
