Pit And Fissure Sealants A Dental sealants (also termed pit and fissure sealants, or simply fissure sealants) are a dental treatment intended to prevent tooth decay. Teeth have recesses on their biting surfaces; the back teeth have fissures (grooves) and some front teeth have cingulum pits. It is these pits and fissures which are most vulnerable to tooth decay because food and bacteria stick in them and because they are hard-to-clean areas. Dental sealant - Wikipedia Sealants are only applied to the back teeth - the molars and premolars. These are the teeth that have 'pits' (small hollows) and 'fissures' (grooves) on their biting surfaces. Your dental team will tell
