Sunless Tanning Why Tanning Is The active ingredient in most sunless tanning products is the color additive dihydroxyacetone (DHA). When applied, dihydroxyacetone reacts with dead cells in the skin's surface layer to temporarily darken the skin and simulate a tan. The coloring typically wears off after a few days. Sunless tanning: What you need to know - Mayo Clinic The popularity of sunless tanning has risen since the 1960s after health authorities confirmed links between UV exposure (from sunlight or tanning beds) and the incidence of skin cancer. Since sunscreen absorbs ultraviolet light and prevents it from reaching the skin,
