for θ . If $\phi(X)$ is any test of a

hypothesis concerning θ , then (T)

given by $\phi(t) = E[\phi(X) | T = t]$ is a test

depending on T only and its power

is identical with that of $\phi(X)$.

hypothesis testing plays an important role in the whole of statistics and in statistical inference. For example, Lehmann (1992) in a review of the fundamental paper by Neyman and Pearson (1933) says: "Nevertheless, despite their shortcomings, the new paradigm formulated in the 1933 paper, and the many developments carried out within its framework continue to play a central role in both the theory and practice of statistics and can be expected to do so in the foreseeable future".
