Genetic factors play a role in many kinds of eye disease,

including those diseases that are the leading cause of blindness among infants, children and adults. More than 60 percent of cases of blindness among infants are caused by inherited eye diseases such as congenital (present at birth) cataracts , congenital glaucoma, retinal degeneration, optic atrophy and eye malformations. Genetic Eye Disorders & Blindness Causes Retinal diseases can affect any part of your retina, a thin layer of tissue on the inside back wall of your eye. The retina contains millions of light-sensitive cells (rods and cones) and other nerve cells that receive and organize visual information. Your retina sends this information to your brain through your optic nerve, enabling you to see. Retinal diseases -

Symptoms and causes - Mayo Clinic Recurrent iritis can result in glaucoma, a serious eye condition characterized by increased pressure inside the eye and possible vision loss.
