A mixed multiple circulate is that which contains a ter- minate part and feveral repeating figures; as  $86 \cdot 325 \cdot 6$ . That is RATIONALE OF 6. That part of the circulate which repeats is termed the repetend; as in  $2 \cdot 6$ , and  $34 \cdot 643 \cdot 6$  and  $643$  are the respective repetends. Detection of CTCs has been associated with a prognosis or response to treatment in individuals with certain types of cancer, primarily breast, colorectal and prostate cancer. LAB.00015 Detection of Circulating Tumor Cells in the ... Indeed, numbers of circulating CD57+ were inversely related to tumor-infiltrating NK-cell numbers. Our data reveal that NK-cell differentiation influences their antitumor potential and that CD57+ NK cells may be a biomarker useful for tailoring HER2 antibody-based therapeutic strategies in breast cancer. High Numbers of Circulating CD57+ NK Cells Associate with ... Results. The absolute number of circulating monocytes, and the numbers of CD14 +high CD16 -, CD14 +high CD16 + and CD14 +low CD16 + subset cells, were significantly higher in MTX non-responders than in responders and healthy controls before starting and throughout treatment. Responders showed normal numbers of monocytes, and of their subset cells, over the study period. The number of circulating monocytes as biomarkers of the ... Presence of circulating tumor cells (CTC) is considered as a sensitive biomarker for early metastatic cascade, cancer progression and drug treatment monitoring .
