Mechanism is the belief that natural wholes are like complicated machines or artifacts, composed of parts lacking any intrinsic relationship to each other. The doctrine of mechanism in philosophy comes in two different flavors. They are both doctrines of metaphysics, but they are different in

scope and ambitions: the first is a global doctrine about nature; the second is a local doctrine about humans and their minds, which is hotly contested. For clarity, we might distinguish these two doctrines Mechanism (philosophy) - Wikipedia NPTEL provides E-learning through online Web and Video courses various streams.
